Kent State University - Stark Campus  
ANALYTIC GEOMETRY AND CALCULUS I - 11964 - MATH 12002 - 621

Spring 2015  
Instructor: Dr. Janice Kover  
Phone: (330)499-9600, ext. 53409 (email will get a faster response than voicemail)  
Office: 409MH Stark Campus  
Office Hours: Mondays: 6-7pm; Tuesdays: 11-12:30pm; Wednesdays: 8-9:30am  
Other Virtual Hours can be made by appointment. To make an appointment, please email me with a few specific dates and times that you are available to meet and I will try to work my schedule to meet with you. To meet during these hours please go to the Virtual Meeting Room.  
Text: "Calculus" V-1 Custom package by James Stewart (ISBN: 9780840002952) ANY edition will be fine, this is just the text that I reference. I typically do not collect homework from the text, but you should be doing the homework out of some Calculus text.  
Required: At least a scientific calculator. Graphing calculators are permitted and encouraged.  

Course Description: This course introduces the subject of Calculus and its applications. We will tentatively cover Chapters 1-5, 7. See page two for detailed learning outcomes given by the math department.  

Course Policies:  
1. Course grades are determined by:  
12% - Videos Lessons YOU ARE GRADED BY THE ACCOMPANYING QUIZZES - these are NOT optional  
12% - May include Turn-In Assignments, Surveys, Short Quizzes, Special Assignments, or Q&A Forums  
76% - Tests (2 non-proctored tests 8% each, midterm 25% proctored, comprehensive Final Exam 35% proctored)  
Grading Scale: 90%-100% A; 80%-89% B; 70%-79% C; 60%-69% D; 0%-59% F (plus and minus grades will be assigned only in close cases)  
2. Summer due dates vary greatly and come quickly. Please stay alert to due dates. While videos will stay open for review, you will need to complete each week’s work on time or you will quickly find yourself too far behind to catch up. If there are extenuating circumstances email the professor immediately attaching the appropriately scanned documentation.  
3. Homework may be collected at any time. That is, you may be asked to scan your homework and turn it in.  
4. You will be given approximately a week to take a proctored exam. Make-up exams will only be given in extenuating circumstances and must have professional documentation for approval.  
5. While there is no monitoring of how you conduct your weekly work it is assumed that you will give your full attention to your work when you view the videos, work on assignments or visit virtual office hours. Keep in mind you must answer the questions in the Video Lessons in Moodle.  
6. Appropriate language is expected both written and verbal during virtual hours. (This includes abbreviations.)  
7. Please keep in mind that while I will do my best to be present at every office hour (both live and virtual) but there are times when events (including technical issues) stop this from occurring. I will do my best to email the class and let them know when there are such occasions. Office hours will not be held if the Stark Campus has classes canceled during the scheduled session.  
8. The proctored final exam is required. Failure to show for the final exam may result in an F for the course.  

Academic Honesty: Use of the intellectual property of others without attributing it to them is considered a serious academic offense. Cheating or plagiarism will result in a failing grade for the work or for the entire course. Repeat offenses result in dismissal from the University. University guidelines require that all infractions be reported to the Student Conduct Officer on our campus.  

Students with Disabilities: University policy 3-01.3 requires that students with disabilities be provided reasonable accommodations to ensure their equal access to course content. If you have a documented disability and require accommodations, please contact the instructor at the beginning of the semester to make arrangements for necessary classroom adjustments. Please note, you must first verify your eligibility for these through Student Accessibility Services (contact 330-244-5047 or visit http://stark.kent.edu/student/resources/accessibility.cfm for more information on registration procedures).  

Office Hours Canceled/Campus Closings: Announcements of class cancellations and/or campus closings will be made on the campus home page. In the case of an emergency, weather-related or otherwise, please check the web page at stark.kent.edu for information on the buildings and times of the closing. While information may be broadcast by radio and television, this should be confirmed by the web page, which is the official announcement of the campus and which will be the information used to determine issues related to student attendance, rescheduling of tests, and other concerns.  

Withdrawal: If you are considering withdrawing from this course, please consult with a staff member in the Office of Student Services of your local campus. Withdrawal from a course can affect financial aid, student status, or progress within your major. For withdrawal deadlines, please refer to http://www.registrar.kent.edu/home/TermUpdate/sche_adj.htm.
Knowledge
The students should be able to understand the concepts of limits, continuity, derivatives, rates of change, linear approximation and differentials, definite and indefinite integrals, inverse functions. They should to formulate the Mean Value Theorem and the Fundamental Theorem of Calculus.

Comprehension
Should be able to compute the derivatives and integrals using basic differentiation and integration formulas.

Application
The main and most important application is to solve many different problems related to the subject.

Analysis
Should be able to relate the derivatives and shapes of graphs. Should use this information for the curve sketching.

Synthesis
Should get use to combine their skills from elementary mathematical courses to solve the problems in Calculus.

Evaluation
Should be able to find the derivative and indefinite integral of a constant, power function, trigonometric functions like sine and cosine, logarithmic and exponential functions. Should be able to evaluate areas between curves.

Class Activities
To solve problems and prove Theorems in class.

Out of class Activities
To submit every week home assignments.
