Assignment #2  (Due 02/20/08)

Answer all questions

1. Write a program that simulates a fortune cookie. The program should display one of five unique fortunes, at random, each time it’s run.

2. Write a program that flips a coin 100 times and then tells you the number of heads and tails.

3. Modify the guess my number game so that the player has a limited number of guesses. If the player fails to guess in time, the program should display an appropriately chastising message.
