

A Novel Framework for Pain Management & Control

Dr. Augustine Samba

Pain Management & Control: End-to-End Communications Infrastructure

Key Enabling Technologies - Medical Informatics Research

- Embedded Sensors**
 - Abstraction of Receptors (Pain, Touch, Temperature, ...)
 - Layered Architecture (Compute, Communicate, Actuate)
 - Energy levels
- Wireless Sensor Networks**
 - Modeling and Simulation of Signaling Pathways
 - Communications Protocols
 - State Machines & Bayesian Modeling
- Wireless Networks**
 - Communications Protocols
 - Multiple Access channels:
 - Transport capacity

Real-Time Pain Management System

- Layered Architecture
- Platform Independence
- Sensor Network Analysis & Control
- Provisioning
- Activation & Removal of Control Signals

Service Creation System

- Logic, Decision Graphs and Controls
- Control Signals:
- Criteria for Control Activation & Removal

⑤

What about Industry?

- Industry has history of
 - forging new research and technology directions and
 - adapting and productizing technology which has demonstrated promise
- Need to strengthen the joint academia/industry research collaborations; joint projects / early stages
- Technology transfer
 - Establish path for tech transfer from academic research to industry
 - Joint projects, faculty, students (academe <----> industry)
- Success Stories: Networking, Parallel and Scalable Computing,
- Industry is interested in Pain Management Technology

⑥
