

Touch Math

Problem	ASL Sign	Value	Dot / Tap	Numeral	Solution
<p>Many students use counting fingers as a method for simple math. However, students who use American Sign Language will almost always get a different or incorrect answer.</p> <p><u>Example:</u> 1+6=How Many?</p> <p>ASL Finger count</p>  <p>1 + 6 = 4</p> <p>Using Objects</p>  <p>The problem is ASL numbers <i>represent</i> a number but do not <i>physically amount</i> to that number, creating much confusion for those who use ASL versus counting on 10 fingers.</p>				1	<p>Each number 1 - 9 has TouchPoints corresponding to the digit's quantity:</p> <p>1 - 5 use single TouchPoints, or dots. 6 - 9 use double TouchPoints, a dot inside of a circle.</p> <p>Students touch <u>single dots once</u>, <u>double dots twice</u>, and each while counting aloud.</p> <p>By touching the TouchPoints and counting aloud, the <i>visual</i> learner, the <i>auditory</i> learner and the <i>kinesthetic</i> learner are each engaged.</p> <p>In TouchMath addition, students count forward. In subtraction, they count backward.</p> <p><u>Example:</u> 1+6=How Many?</p>  <p>Students touch, count, and repeat the problems and answers aloud to ensure success.</p>
