Even More on Debt and Taxes

“Allowed Deficit” = $200 Billion

Objections to Ricardian Equivalence
- People don’t understand deficits.
- We have passed the debt to our children.
- **This means we never need to tax.**
- Incentive Effects.

The Wise and Foolish Use of Credit
- If you or I purchase something with a credit card, we know we must ultimately pay for it.
- Still, some people are foolish and mishandle credit cards.

The Wise and Foolish Use of Credit
- What about the government?
- Because it can spend without immediately worrying about paying the bills, does the government continually get in over its head?

How Much Debt
- The answer: the government can sustain any debt/GDP ratio, but it cannot allow the ratio to grow without bounds.
  
  GDP = $10,000 Billion
  Growing at 5% per year
  Government Debt = $4,000 Billion

How Much Debt
- The answer: the government can sustain any debt/GDP ratio, but it cannot allow the ratio to grow without bounds.
  
  GDP = $10,000 Billion
  Growing at 5% per year
  Government Debt = $4,000 Billion
  “Allowed Deficit” = $200 Billion
Ponzi Schemes

- Suppose the government let the Debt/GDP ratio grow without bounds, and suppose consumers are all immortal.
- In theory, no problem.

Objections to Ricardian Equivalence

- People don’t understand deficits.
- We have passed the debt to our children.
- This means we never need to tax.
- Incentive Effects.

An important issue, which we defer to later.

Incentive Effects.

End
