

**Arduino.cc
Site Blueprint**

**Assignment # 5
IAKM 60101-004
Information Architecture**

**By James Allard
Kent State University
6/27/2015**

This is a map for the main navigation areas of the arduino.cc home page.

All G numbers are elements of the global navigation bar. All F numbers are elements of the site footer.

Both global and footer navigation elements are persistent throughout the site

Other elements on the home page, not shown here, include:

- * A Site Search Box
- * Log In & Sign Up
- * Newsletter Sign Up Box
- * Copyright Notice

Legend

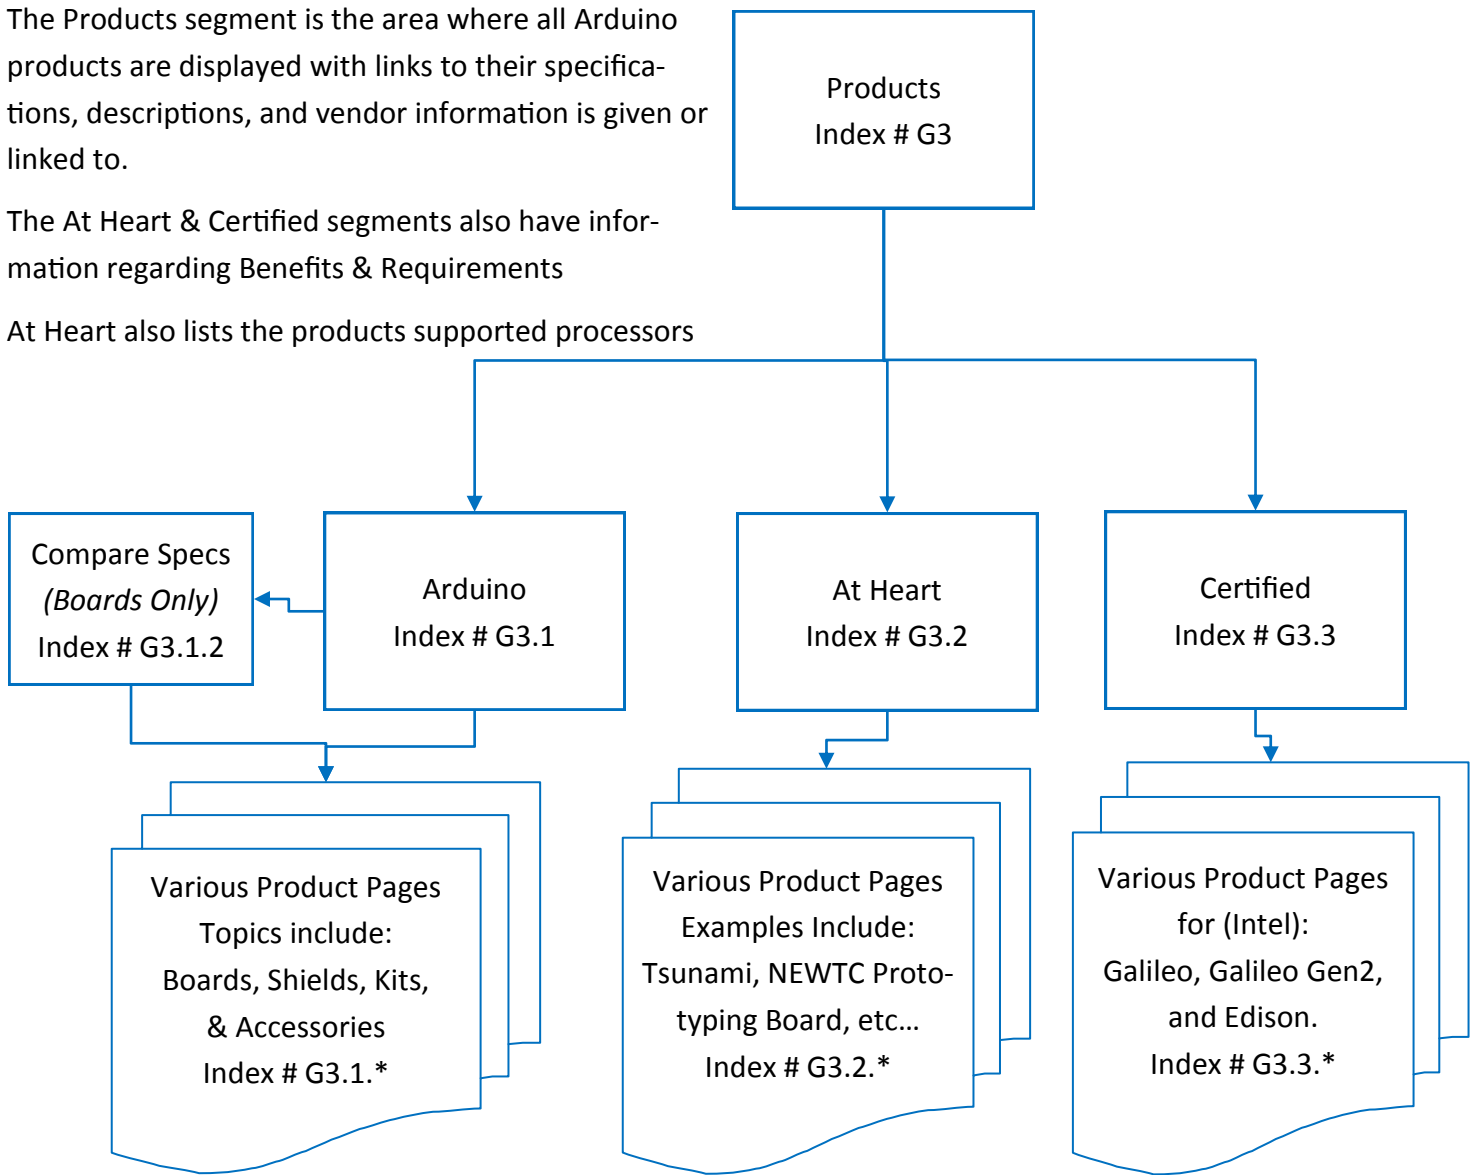

The main home page of Arduino seems to be well designed in order to facilitate the ease of finding information in key categories on the site. The only suggestion I would make is to move products before buy in the menu. This would create a left to right flow that would be a more natural user progression path.

The Products segment is the area where all Arduino products are displayed with links to their specifications, descriptions, and vendor information is given or linked to.

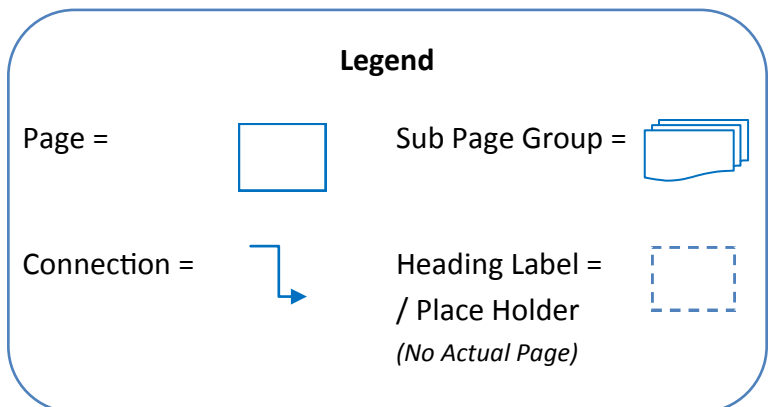

The At Heart & Certified segments also have information regarding Benefits & Requirements

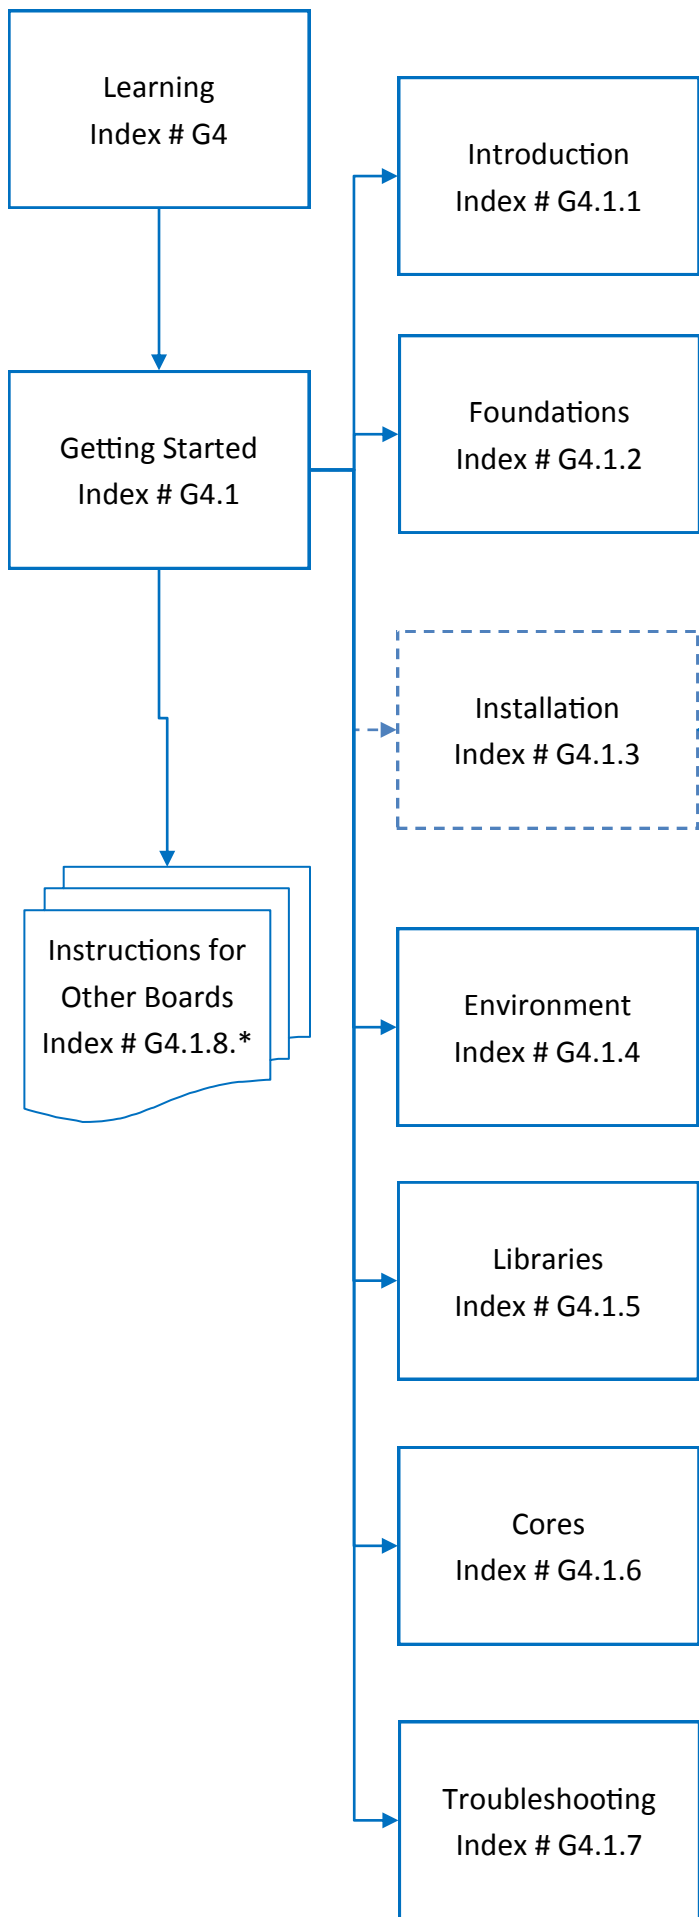

At Heart also lists the products supported processors

The Arduino product page (G3.1) is, for the uneducated, very confusing. Many of the product images look very much alike and without the (Compare Specs) sub page figuring out the differences would be near impossible without viewing each product sub page individually.

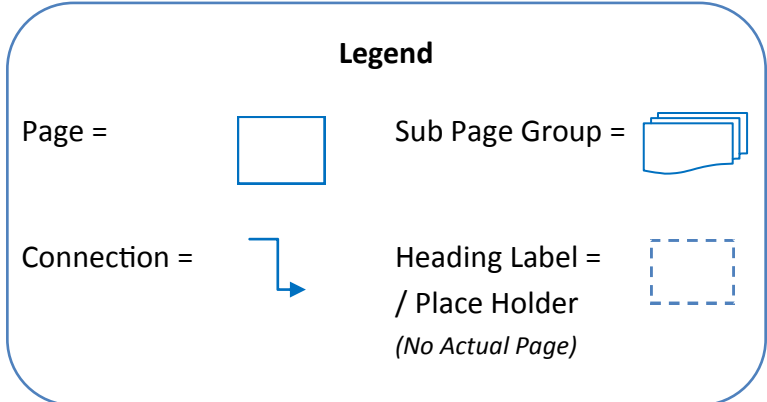

The At Heart page has a feature that breaks the design of the other two top level product pages (Arduino & Certified). Which is that the images for the products are not links as they are on the other two pages.

The Learning segment contains all the additional information about how to utilize the Arduino products, and (as far as I can tell) it is the largest segment of the site. It includes program code examples, user generated Arduino project examples, and much more as you can see via pages 3-5 in the blueprint.

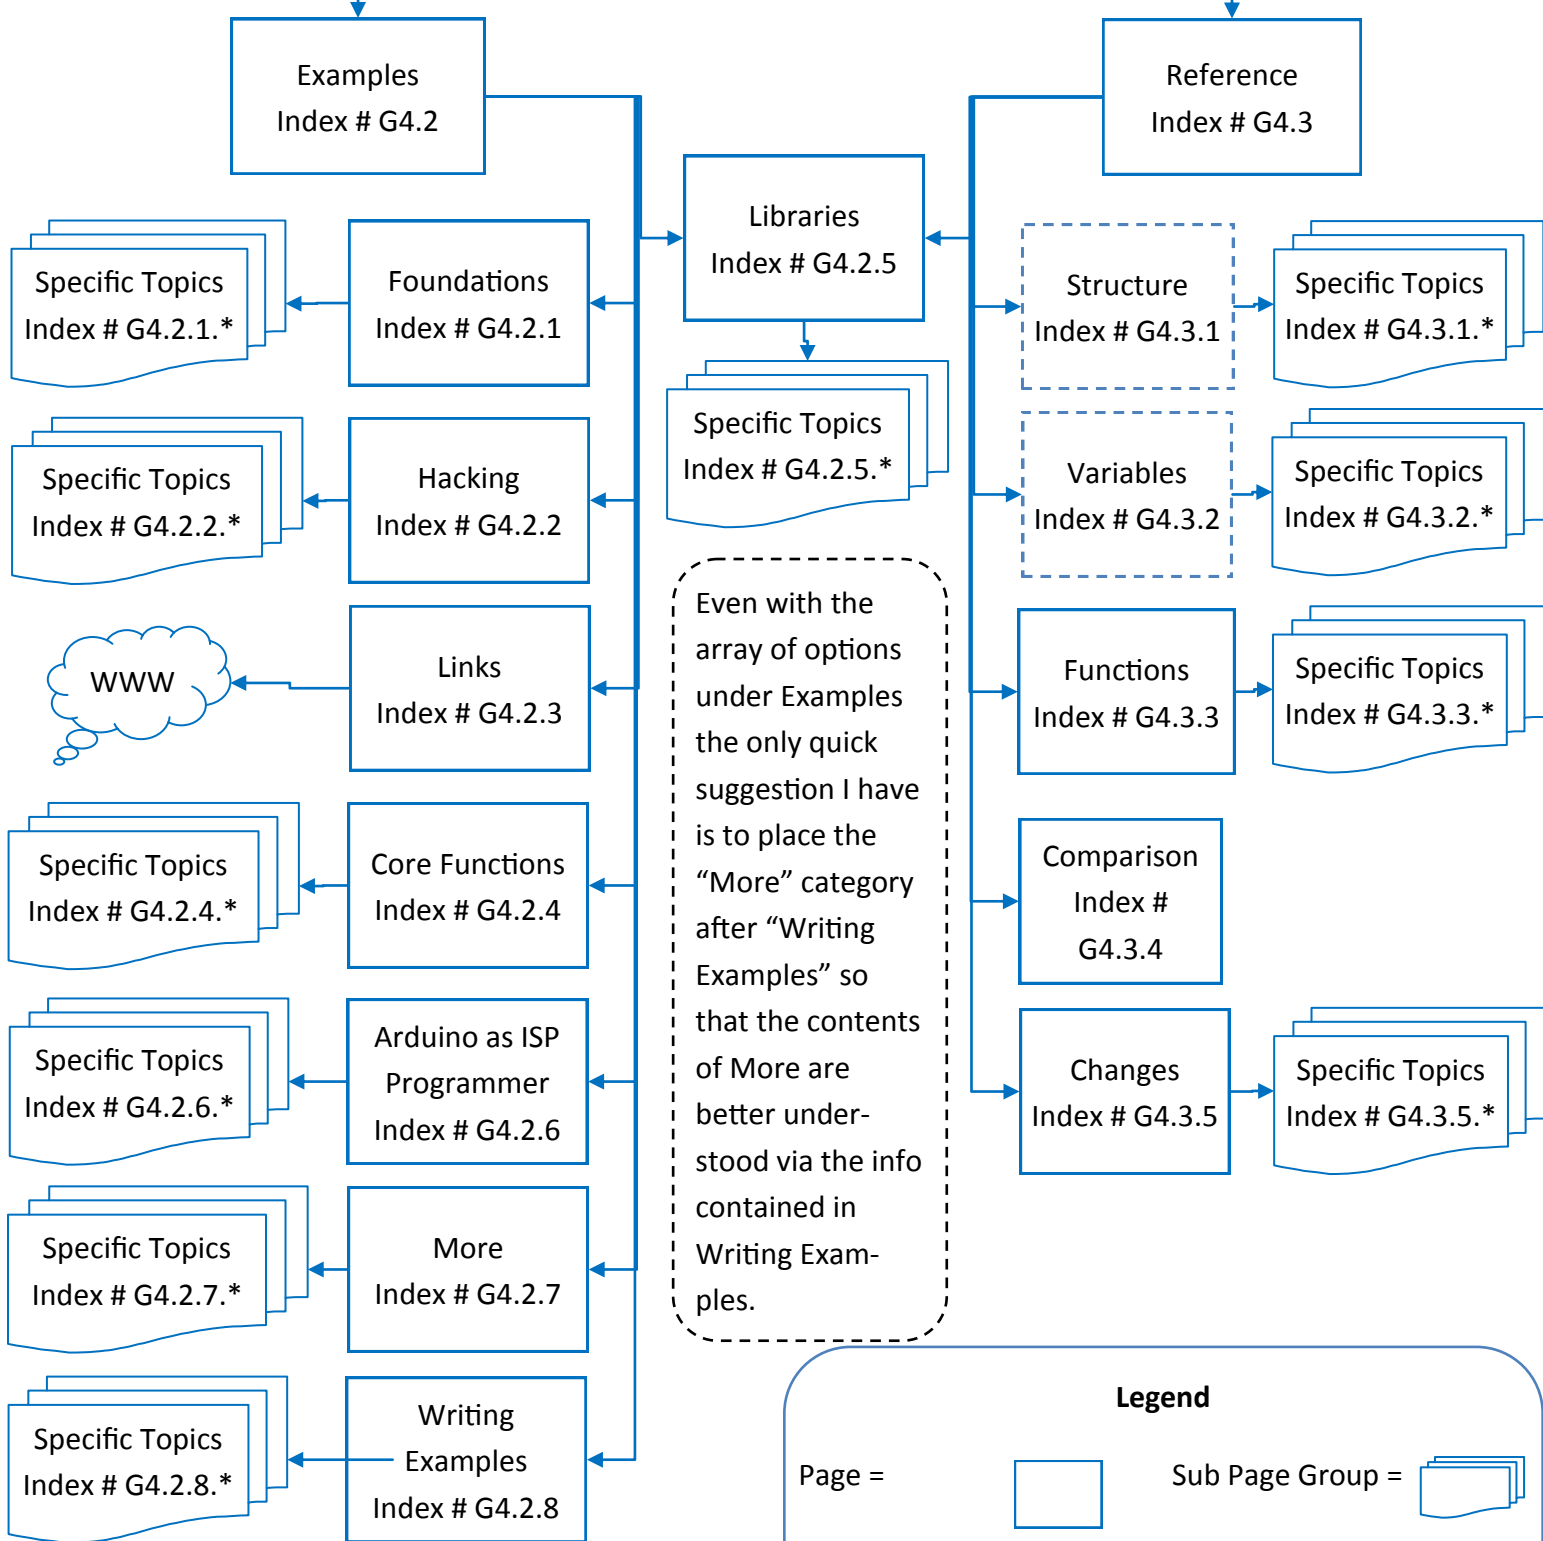

The Getting Started page is ordered very well for its designated purpose. The natural user flow appears to be an accurate order of how a user would need to find information about their newly obtained Arduino product. Confusion may arise however if the newly obtained board falls inside the "Other Boards" category, but while that list is long it is alphabetically sorted for better discovery.

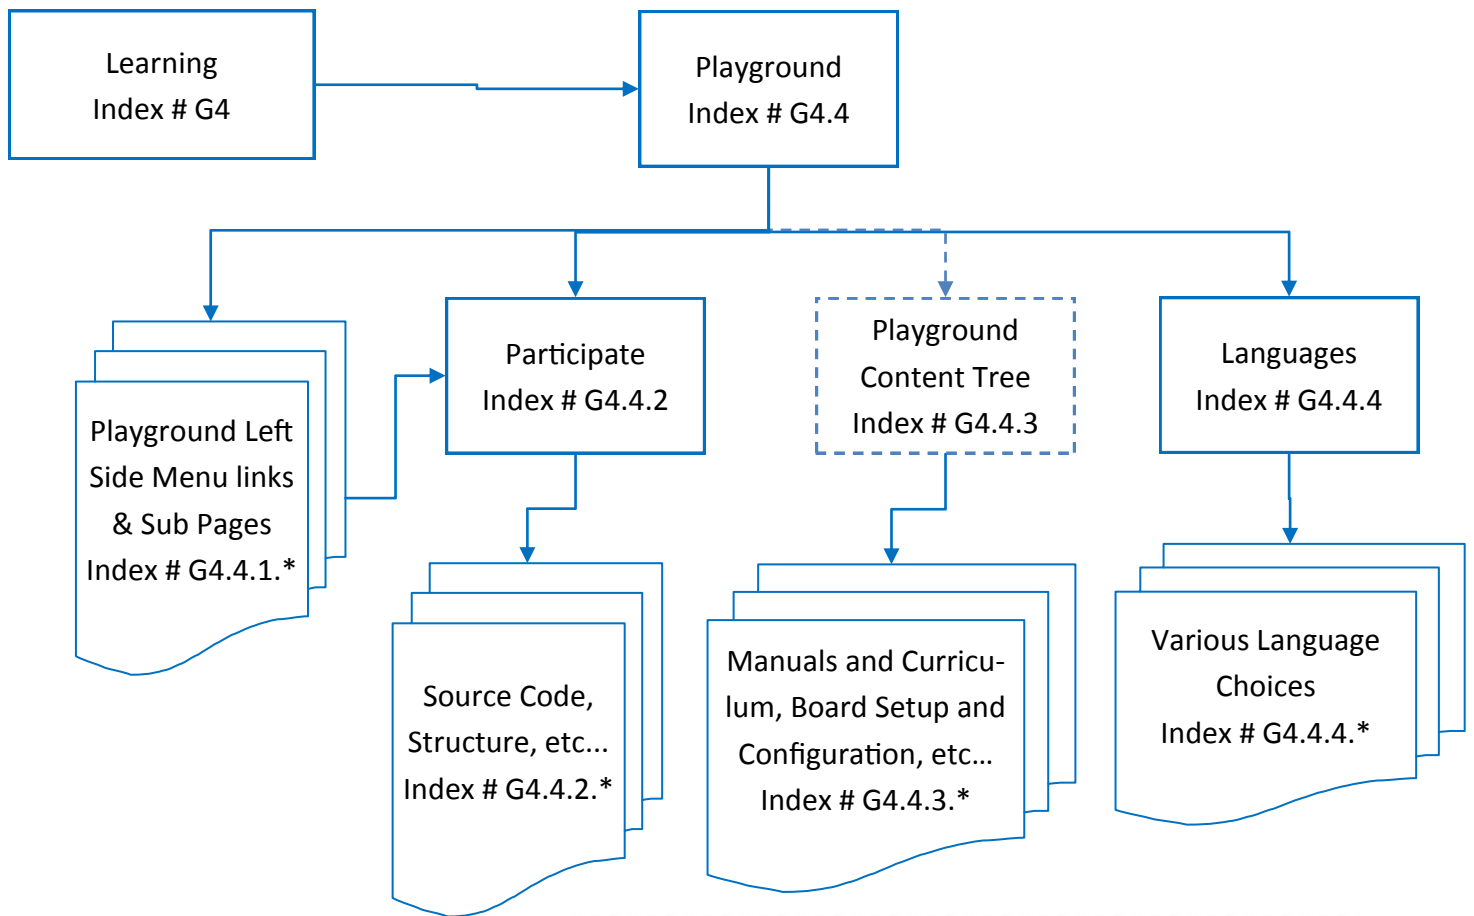

The sheer volume of information on the Examples page could be overwhelming to visitors.

Learning Index # G4

The Reference page breaks site standards by introducing a non-standard colored link with the "Functions" title.

PARTICIPATE

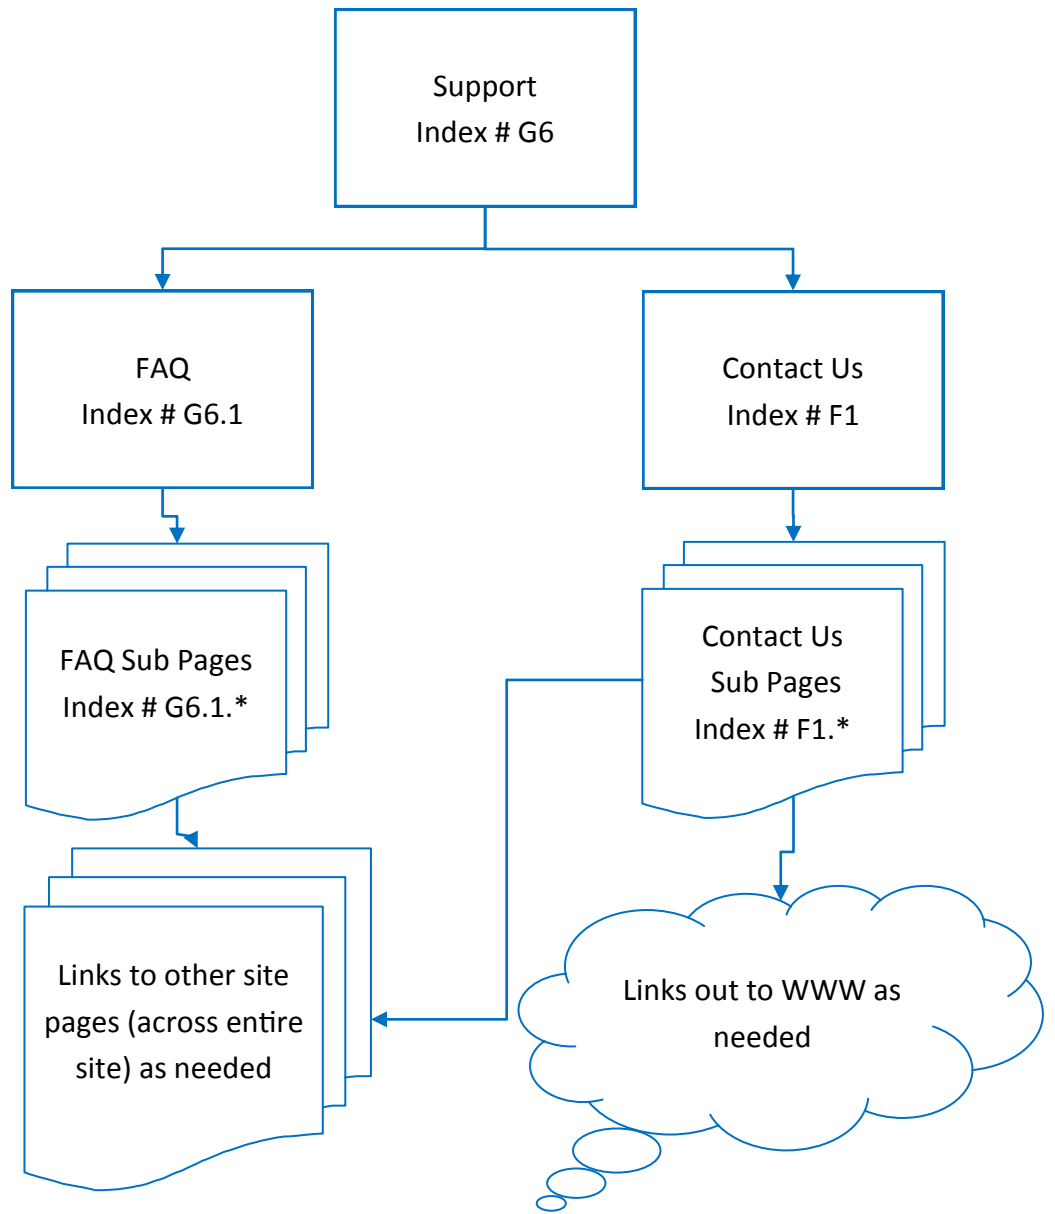

The “Playground” is the area with the most information, and the most breaks in previous site style standards. The playground has its own left side menu, it uses non-standard link color (orange) as well as site standard link colors, and the header “Playground Content Tree” is not a link but the header “Languages” is. Admittedly this section’s content is governed by the customers not the site owners, and the level of information is staggeringly varied, but the site style should remain the same if at all possible.

Playground and Buy are the only two site segments with left side menus. As Buy lists product categories, and Playground lists topic and task categories this makes sense. However this menus sudden appearance certainly adds to the amount of information that a user has to process in order to find what they are seeking on the site.

Playground’s Side Menu

The Support segment contains all the help and Arudino.cc contact information, or in other words sources of support in all forms.

The two support sub pages “FAQ” and “Contact Us” are well laid out with their two column design of question / topic headers and content. Answers and information are easy to find, and the included links stand out amongst the text easily enough. I would however suggest that the questions and contact category labels be differentiated from the links in some fashion so users don’t mistake a heading label for a link.

The screen shot image below illustrates the differentiation problem I described above.

Documentation

If you have found an error in the online documentation, please check if it’s already known by looking at the github documentation issues, and if it’s not known, please **add it to the list.**

Legend

- Sub Page Group = 
- Connection = 
- Heading Label / Place Holder (No Actual Page) = 

Key information architecture features of Arduino.cc:

- Main Organization Schemes: Hybrid of Topic & Task oriented schemes with the exception of “Blog” which is Chronological.
- Main Organization Structure: Appears to be Hypertext.
- Supplemental Navigation System: Site Search

- Labels: Contextual Links, Headings, Navigation System Choices, and Index Term Labels are all present and used to good effect on the site.

Critique (Changes):

- The style of the site is useful and distinctive; however it is not consistent across all pages.
 - I recommend unifying the style across all pages to merge the various portions of the site. Doing this will lessen the confusion currently faced on the site by changing style standards for such things as labels and links for an example.
- Libraries appears in two places: first as a linked heading under Learning -> Examples (G4.2), and again as a link on the top of the Learning -> Reference page (G4.3). Also the libraries page (G4.2.5) that the links point to does not contain the same information that is beneath the heading Libraries on the Examples page.
 - I recommend uniting all of the various Libraries information under the existing Libraries page and giving it it's own pull down menu selection instead of linking to it in different ways from various pages. This will lessen confusion, and create better findability for those seeking the Libraries information.
- Playground is a site unto itself. The navigation, styling, and content sources are all different than those from the rest of the main Arduino site.
 - I have two possible recommendations for the Playground segment.
 - Option 1: revamp the styling of the Playground site to match the rest of the Arduino site. This will lessen user confusion, and allow for a more unified site experience.
 - Option 2: Turn the Arduino Playground site into its own site...not a sub page of Arduino.cc. This will allow the Playground to have its own navigation system (top and left side column), its own unique style, and as it is created by user generated content the users will gain more of a sense of ownership when adding information to the site. As it can still be linked to from the Arduino.cc main site no content will be lost.

Critique (Keep):

- Keep the site search. This is a massive site full of useful information for dealing with the various Arduino products sold here. A search interface is the only way for really quick information discovery in such a large site.
- Keep the existing Organization Schemes & Structures as they are both functional and effective with the current design and the various kinds of information present.
- Keep or increase the level of user involvement in the Forum & Playground as this will increase the sense of community and user ownership on the site. These users may then draw new users to the products and site.
