

Consumption

More on Inheritances

The Immortal Consumer

$$U = \gamma_1 \log(c_1) + \gamma_2 \log(c_2) + \gamma_3 \log(c_3) + \gamma_4 \log(c_4) + \gamma_5 \log(c_5) + \dots$$

The Immortal Consumer

$$U = \gamma_1 \log(c_1) + \gamma_2 \log(c_2) + \gamma_3 \log(c_3) + \gamma_4 \log(c_4) + \gamma_5 \log(c_5) + \dots$$

$$U = \log(c_1) + \gamma \log(c_2) + \gamma^2 \log(c_3) + \gamma^3 \log(c_4) + \gamma^4 \log(c_5) + \dots$$

$1 > \gamma > 0$

The Immortal Consumer

$$z = y_1 + y_2 \frac{1}{1+r} + y_3 \left(\frac{1}{1+r} \right)^2 + y_4 \left(\frac{1}{1+r} \right)^3 + \dots$$

Hall Test

$$c_t = \phi z_t$$

Hall Test

$$c_t = \phi z_t$$

$$c_{t-1} = \phi z_{t-1}$$

Hall Test

$$c_t = \phi z_t$$

$$c_{t-1} = \phi z_{t-1}$$

$$c_t - c_{t-1} = \phi(z_t - z_{t-1})$$

Hall Test

$$c_t - c_{t-1} = \phi(z_t - z_{t-1})$$

Any changes in z must be unexpected.

Hall Test

$$c_t - c_{t-1} = \phi(z_t - z_{t-1})$$

$$c_t - c_{t-1} = \phi \varepsilon_t$$

Hall Test

$$c_t - c_{t-1} = \phi \varepsilon_t$$

$$c_t = c_{t-1} + \phi \varepsilon_t$$

$$c_t = c_{t-1} + \varepsilon_t$$

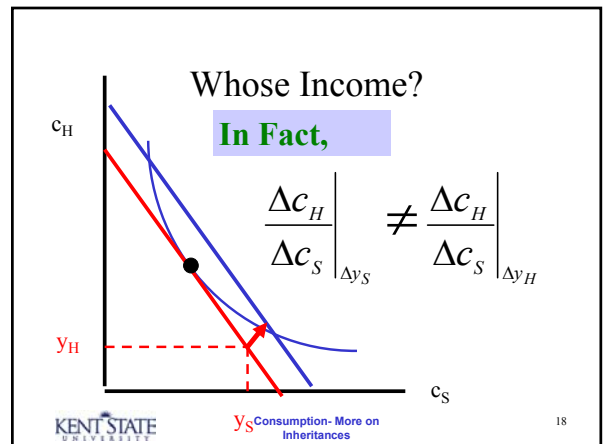

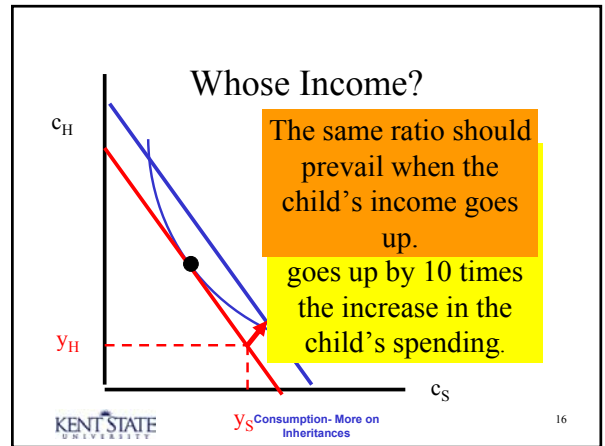

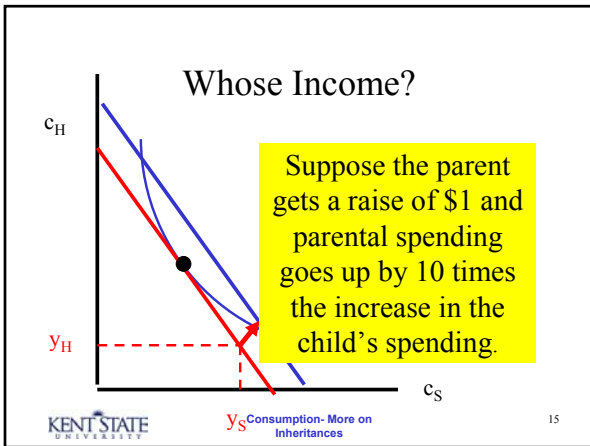

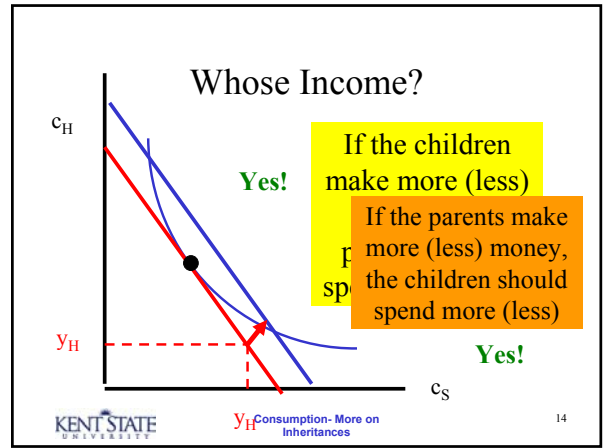

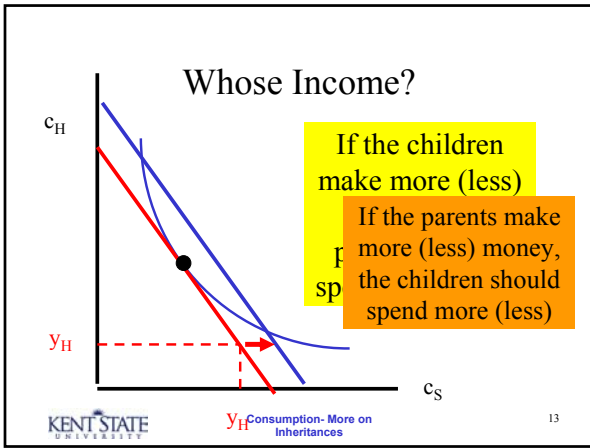

Whose Income?

Whose Income?

If the children make more (less) money, the parents should spend more (less)

Thoughts
