

Updating the Model

The Raw Phillips Curve

The Correct Phillips Curve

Applying Okun's Law

$$U - U_n \approx \eta_e - \eta$$

$$\frac{Y_P - Y_A}{Y_A} \cong \left(\frac{1}{2}\right)(U - U_n)$$

Restating Okun's Law

$$\frac{Y_P - Y_A}{Y_A} = \theta(\eta_e - \eta)$$

Restating Okun's Law

$$\frac{Y_f - Y_A}{Y_A} = \theta(\eta_e - \eta)$$

Graphing the Function

KENT STATE UNIVERSITY

Updating the Model

Our Starting Point

KENT STATE UNIVERSITY

Updating the Model

Our Starting Point

Fortunately a couple of simple steps will reconcile these two graphs

KENT STATE UNIVERSITY

Updating the Model

Restating the Graph

- P_0 = Price Level last year (or period)
- $P = P_0(1+\eta)$
- $P_e = P_0(1+\eta^e)$

KENT STATE UNIVERSITY

Updating the Model

Restating the Graph

$$\eta - \eta_e = \frac{1}{P_0}(P - P_e)$$

$$Y = f(\eta - \eta_e) = f\left(\frac{1}{P_0}(P - P_e)\right)$$

$$Y = P(P | P_e)$$

$\eta - \eta_e$

KENT STATE UNIVERSITY

Updating the Model

The P curve

KENT STATE UNIVERSITY

Updating the Model

The P curve

- $P > P_e$:
 $Y > Y_f$
- $P < P_e$:
 $Y < Y_f$
- $P = P_e$,
 $Y = Y(P_e) \equiv Y_f$

The Intuition

$$\Delta w_R = \omega \Delta w \approx \omega \Delta P$$

Our Basic Graph

The Y and M Curves

A familiar friend

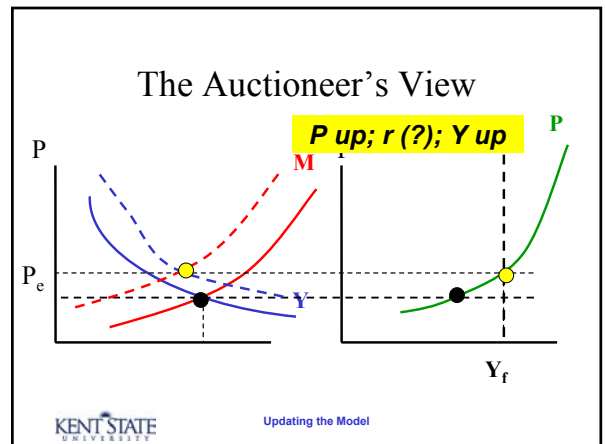

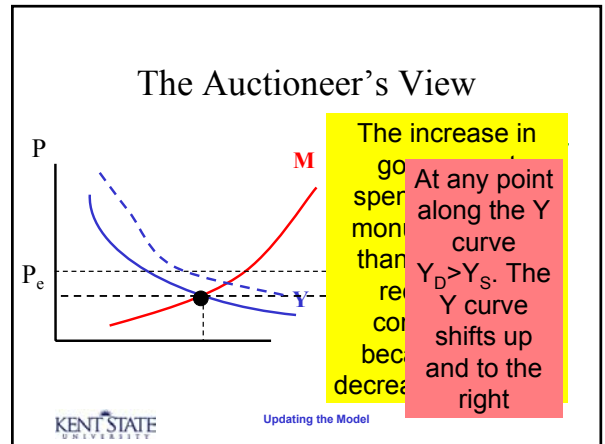

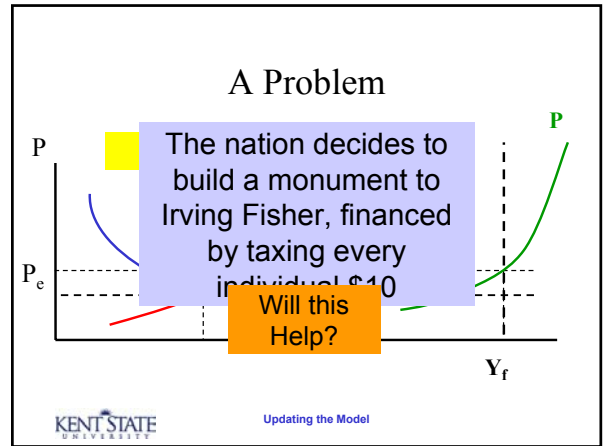

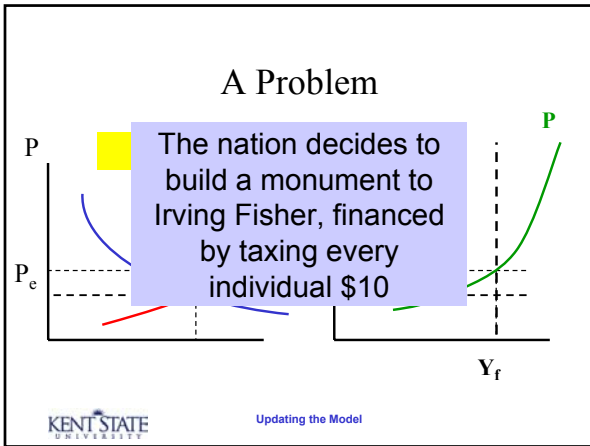

The Y and M Curves

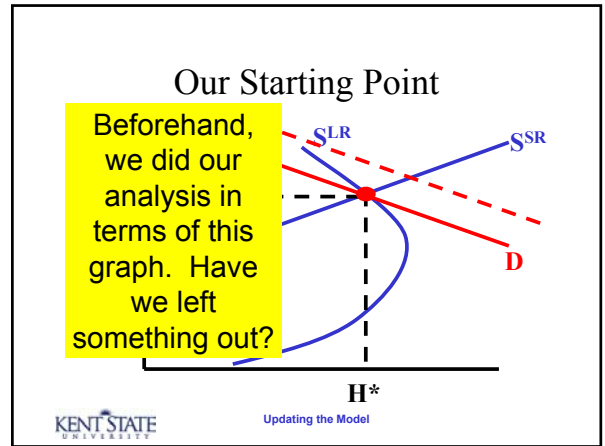

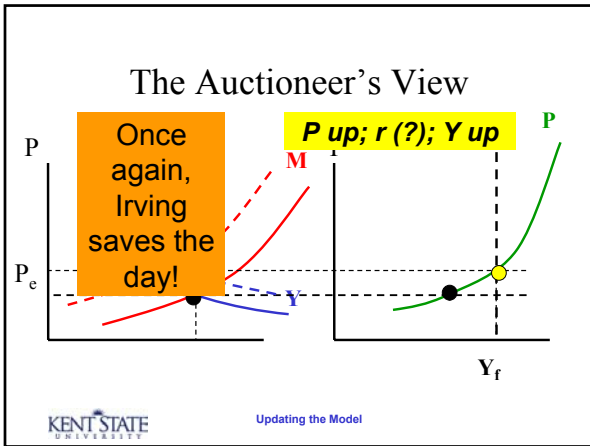

Because $Y = P(P)$, the shapes of the Y and M curves are slightly altered.

A Problem

Another Objection

- Workers know the (well-deserved) monument is coming, and with it increased government purchases..

KENT STATE UNIVERSITY

Updating the Model

Another Objection

$\Delta w_R = \omega \Delta w \approx \Delta P$

Might we get a change in expectations?

Perhaps, but let's keep this simple. No shift in P curve

- Workers know the (well-deserved) monument is coming, and with it increased government purchases..

KENT STATE UNIVERSITY

Updating the Model

Another Objection

$\Delta w_R = \omega \Delta w \approx \Delta P$

Might we get a change in expectations?

Perhaps, but let's keep this simple. No shift in P curve

- Workers know the (well-deserved) monument is coming, and with it increased government purchases..

KENT STATE UNIVERSITY

Updating the Model

Another Objection

We return to this issue later

$$\Delta w_R = \omega \Delta w \approx \Delta P$$

Perhaps, but let's keep this simple. No shift in P curve

might we get a change in expectations? increased government purchases..

The Basic Model
