

Taxing a Competitive Industry

Competitive Diversity

- How can cost functions differ?
- Economic and Accounting Profits
- **Taxing a Competitive Industry**
- **Consumer and Producer Surplus**

A Tax with Horizontal Long Run Supply Curve

Upward Sloping Supply Curve

A Tax Increase

It Gets Shifted

How Much Gets Passed

$$\text{Percent_to_Consumer} = \frac{\eta_s}{\eta_s - \eta_d}$$

How Much Gets Passed

$$\text{Percent_to_Consumer} = \frac{\eta_s}{\eta_s - \eta_d}$$

η_s	η_d	Percent
∞	Whatever	100
1	-2.0	33
1	-1.0	50
1	-0.5	67
0	Whatever	0

End
