

## IP Address Scheme for Class\*

1. Using Virtual PC 2007 console, select Settings for the virtual system you will be using.
2. For the Network setting, select “Local Only” for Adapter 1. (Use shared networking (NAT) only if you need the Internet.)
3. Start your virtual PC environment.
4. Configure Alternate IP Address for the TCP/IP properties as listed below.
5. For Folder Options, uncheck “Use simple file sharing (Recommended)”.

|              |                       |
|--------------|-----------------------|
| IP Network:  | 192.168.214*.21 - 254 |
| Subnet Mask: | 255.255.255.0         |

|                    |                |
|--------------------|----------------|
| Domain Controller: | 192.168.214*.1 |
| Default DNS:       | 192.168.214*.1 |
| Default Gateway:   | 192.168.214*.1 |

Save 20 IP Addresses for Servers/Domain Controllers/Printers/Routers/Switches.

---

\* Third octet is your unique assigned number for this class.
